**Test Parameters:** 550 TDS Filtered (5-Micron), Dechlorinated, Municipal Feedwater, 65 psi / 4.50 bar Feed Pressure, 100 psi / 6.9 bar Operating Pressure, 77°F / 25°C, Recovery as stated, 7.0 pH. Data taken after 60 minutes of operation.

**To Obtain the System's Maximum Recovery,** please contact your local dealer in order to provide details on the specific application and feed water composition. Maximum recovery of the system varies depending on feed water composition.

A. Product flow and standard recovery rates are based on feedwater conditions as stated above. Do not exceed the recommended permeate flow.

B. Does not include operating space requirements.

C. Does not include membrane(s).

D. If any of the feed water parameters are not within the limits given, consult your local dealer or distributor for assistance.

E. Low temperatures and feedwater quality, such as high TDS levels will significantly affect the systems production capabilities and performance. Computer projections must be run for individual applications which do not meet or exceed minimum and maximum operating limits for such conditions.

F. System Operating Pressure is based on 60 psi feed pressure, minimum concentrate flow as stated and an average of 2000 gpd flow per membrane at 77°F.
